STAHL CraneSystems knows what makes the perfect crane out of your steel beams. The experience gained from many decades of crane building lies in our crane components. Although we stopped building crane systems in 2009, we do not miss any opportunity to pass on our extensive know-how to our crane building partners. We use the new freedom we now have to push the development and construction of modern hoisting technology, drive technology and control technology forward even more intensively.

- *Mechanical Belt Fastening – the process of joining belt ends with metallic or non-metallic fasteners.*
- *Endless Splicing – the process of joining belt ends through a combination of pressure, heat, and time or through chemical bonding.*
